Cable Monitoring & Maintenance Systems

ILJIN Electric is a global leader in the heavy electrical industry providing the best products and services with cutting edge technology of world class and competitiveness.

We, ILJIN Electric Co. Ltd., founded in 1968, are one of companies in ILJIN Group that provides new materials and total solution to the power transmission & distribution industry. Since our commencement, we have experienced substantial growth fueled by our desire to become “your total solution provider for the 21st century”. Moreover, we continue to increase our market share in the high-tech sector based on our 100% technological self-reliance.

Since 1994, our Cable Division has been manufacturing, assembling and installing the Extra High Voltage(EHV) cables and accessories. By providing world class cable networks in the power industry, we have also been playing a pivotal role as the backbone of a nation's key industries.

ILJIN Electric will endeavour to elevate our status as a global company by successfully carrying out various projects over 30 countries around the world. We aim to create customer value through best service, technology, passion and innovation.

Our main products include overhead transmission line, insulated wire, medium/low voltage cable, special cable, (Extra) high voltage cable and accessories.

1. Cable Design & Construction

As per IEC standard the power cable is designed and manufactured with following construction ;

The maximum conductor temperature is ;

• Normal operation : 90°C

• Short circuit operation : 250°C

1. Conductor

The conductor consists of annealed copper or hard drawn aluminum stranded wire and be circular stranded, circular compact stranded, circular compressed or segmental compact stranded. The segmental compact stranded construction shall be used for the conductor with area greater than or equal to 800mm². Specially the enameled copper wire shall be used to reduce the skin & proximity effect of conductor. If necessary, semi-conducting binder tape may be applied on the conductor.

2. Conductor screen

The conductor screen consists of an extruded layer of thermosetting semi-conducting compound and shall be continuous and cover the whole surface area of the conductor. The conductor screen shall be firmly bonded to the insulation. The outer surface of the conductor screen shall be circular.

3. Insulation

The insulation is an extruded cross-linked polyethylene (XLPE). The insulation shall be applied by extrusion and vulcanized to form a compact homogenous body free of microvoids and contaminants. The insulation shall be extruded with conductor screen and insulation screen layer simultaneously. The insulation thickness shall be designed by critical impulse and AC withstand voltage.

4. Insulation screen

The insulation screen consists of an extruded layer of thermosetting semi-conducting compound and shall be continuous and cover the whole surface area of the insulation. The insulation screen shall be firmly bonded to the insulation.

5. Metal sheath

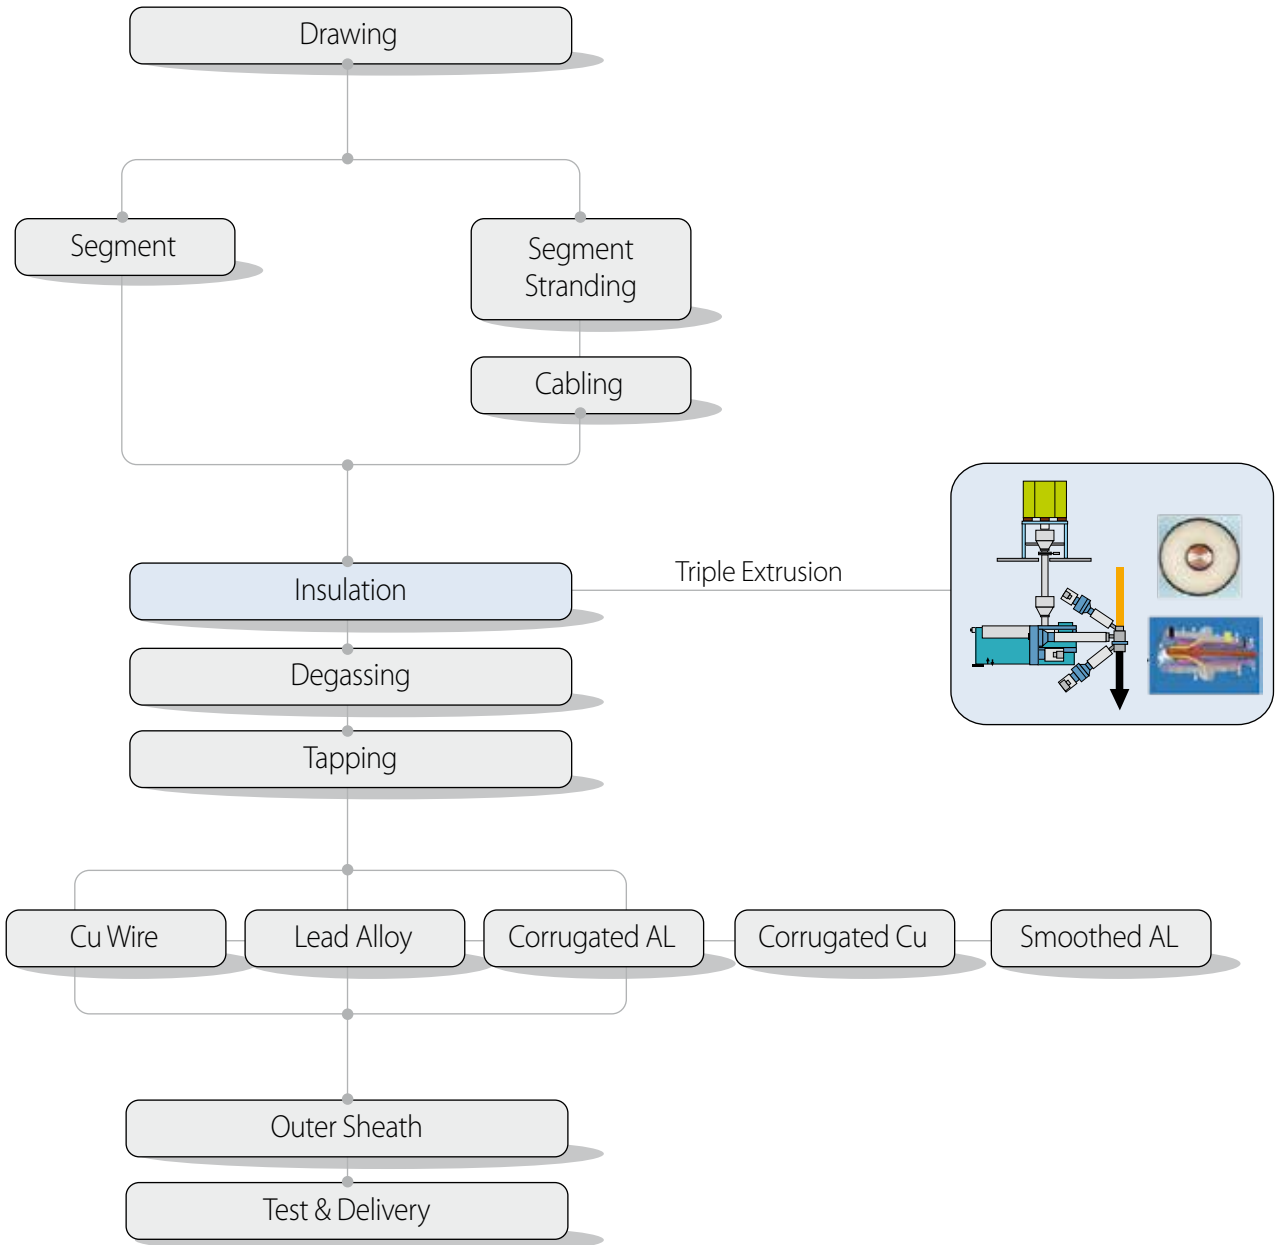

The metal sheath consists of copper wire, lead alloy, corrugated aluminum, corrugated copper or smoothed aluminum over insulation screen. The metal sheath shall be designed to meet the required earth fault current.

6. Outer sheath

The outer sheath consists of an extruded layer of polyethylene or polyvinyl chloride compound.

2. Manufacturing Process & Facility

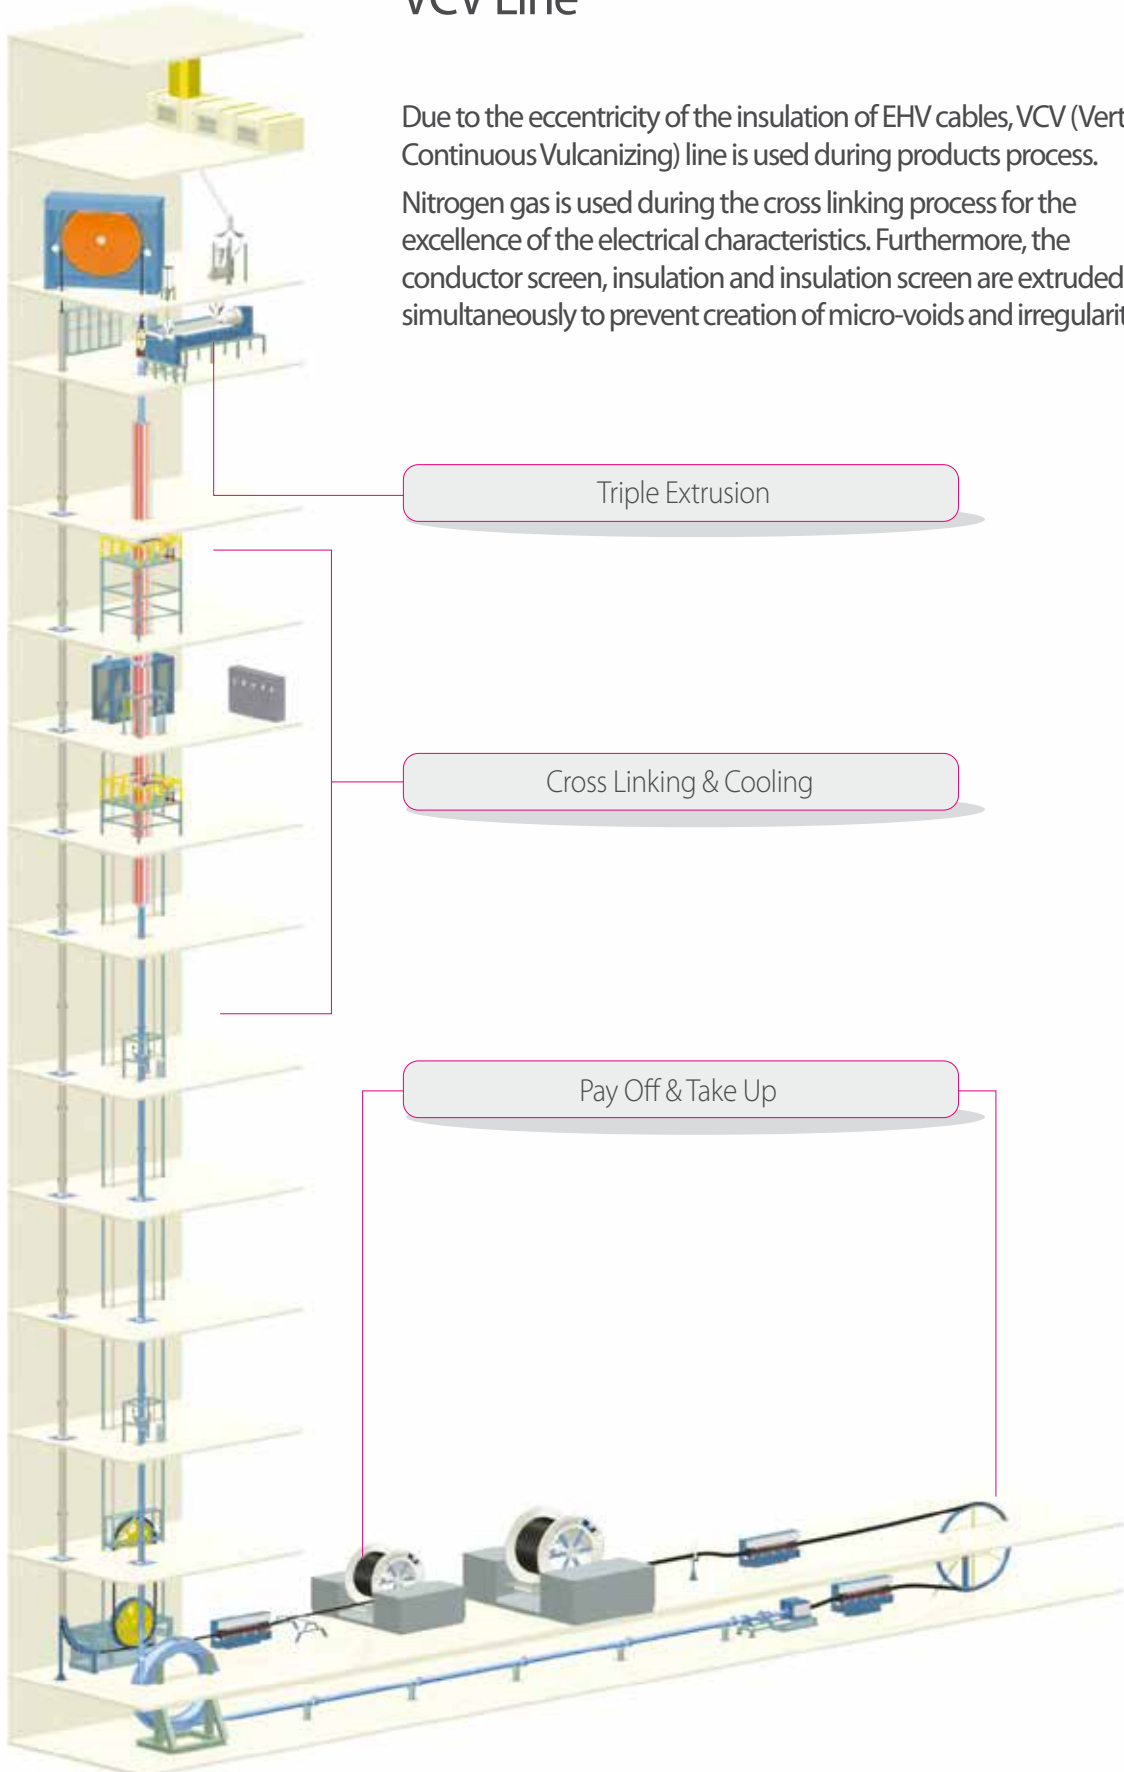

Flow chart of manufacturing process

VCV Line

Due to the eccentricity of the insulation of EHV cables, VCV (Vertical Continuous Vulcanizing) line is used during products process.

Nitrogen gas is used during the cross linking process for the excellence of the electrical characteristics. Furthermore, the conductor screen, insulation and insulation screen are extruded simultaneously to prevent creation of micro-voids and irregularities.

Triple Extrusion

Cross Linking & Cooling

66~69kV XLPE Cable with Corrugated Aluminum Sheath

Cable type : 66~69kV Cu(or AL)/XLPE/Corrugated AL/PE(or PVC)

1. Conductor : Copper or enameled copper or aluminum
2. Conductor screen : Semi-conducting compound
3. Insulation : Cross-linked polyethylene
4. Insulation screen : Semi-conducting compound
5. Cushion layer : Semi-conducting tapes
6. Metal sheath : Corrugated aluminum
7. Outer sheath : Polyethylene or polyvinyl chloride

110~115kV XLPE Cable with Copper Wire Screen

Cable type : 110~115kV Cu(or AL)/XLPE/CWS/PE (or PVC)

1. Conductor : Copper or enameled copper or aluminum
2. Conductor screen : Semi-conducting compound
3. Insulation : Cross-linked polyethylene
4. Insulation screen : Semi-conducting compound
5. Cushion layer : Semi-conducting tapes
6. Metal screen : Copper wires
7. Water blocking layer : Plastic laminted aluminum foil
8. Outer sheath : Polyethylene or polyvinyl chloride

132~138kV XLPE Cable with Lead alloy Sheath

Cable type : 132~138kV Cu(or AL)/XLPE/Lead alloy/PE(or PVC)

1. Conductor : Copper or enameled copper or aluminum
2. Conductor screen : Semi-conducting compound
3. Insulation : Cross-linked polyethylene
4. Insulation screen : Semi-conducting compound
5. Cushion layer : Semi-conducting tapes
6. Metal sheath : Lead alloy
7. Outer sheath : Polyethylene or polyvinyl chloride

275~287kV XLPE Cable with Copper Wire Screen

Cable type : 275~287kV Cu(or AL)/XLPE/CWS/PE (or PVC)

1. Conductor : Copper or enameled copper or aluminum
2. Conductor screen : Semi-conducting compound
3. Insulation : Cross-linked polyethylene
4. Insulation screen : Semi-conducting compound
5. Cushion layer : Semi-conducting tapes
6. Metal screen : Copper wires
7. Water blocking layer : Plastic laminated aluminum foil
8. Outer sheath : Polyethylene or polyvinyl chloride

Continuous Current Rating Capacity

The continuous current rating is calculated in accordance with IEC 60287.

Laying conditions

The technical data which appears in the preceding pages is calculated based on the following laying conditions:

1) Ground temperature : 30°C	2) Ambient temperature : 40°C	3) Soil thermal resistivity : 1.2K.m/W
4) Depth of laying : 1.2m	5) Installation formation : Trefoil formation	6) Max. conductor temperature : 90°C
7) Frequency : 50Hz	8) Load factor : 100%	9) Sheath ground : Cross bonding

Correction factor for various laying Condition

Ambient temperature (°C)	25	30	35	40	45	50	55
Correction factor	1.16	1.11	1.06	1.00	0.94	0.88	0.82
Ground temperature (°C)	20	25	30	35	40	45	50
Correction factor	1.08	1.04	1.00	0.96	0.91	0.87	0.82
Thermal resistivity of soil (k.m/w)	0.8	1.0	1.2	1.5	2.0	2.5	3.0
Correction factor	1.16	1.07	1.00	0.92	0.82	0.74	0.69
Depth of laying (m)	0.5	0.8	1.0	1.2	1.5	2.0	2.5
Correction factor	1.10	1.05	1.02	1.00	0.98	0.95	0.93

FOC embedded type
(for DTS or DRS)

Short Circuit Current Rating

The short circuit current rating is calculated in accordance with IEC 60949.

Laying conditions

$$I = \epsilon \frac{KS}{\sqrt{t}} \sqrt{\ln \left(\frac{\theta_f + \beta}{\theta_i + \beta} \right)}$$

- | | |
|---|----------------------------------|
| 1) I : Short circuit current rating | [A] |
| 2) ε : Factor to allow for heat loss into adjacent components | |
| 3) K: Constant depending on the material of the current carrying component | [Copper : 226, Aluminum : 148] |
| 4) S : Geometrical cross-sectional area of conductor | [mm ²] |
| 5) t : Duration of short circuit | [sec] |
| 6) θ _f : Final temperature | [°C] |
| 7) θ _i : Initial temperature | [°C] |
| 8) β : Reciprocal of temperature coefficient of resistance of the current carrying component at 0°C | [Copper : 234.5, Aluminum : 228] |

7. Cable Installation & System Design

1. Laying the Cable

	Direct Buried	In Underground Duct	In Air (Tunnel)
Advantage	<ul style="list-style-type: none"> - Low cost - Good heat dispersion 	<ul style="list-style-type: none"> - Convenient to expand or remove - Minimal exposure to external damage 	<ul style="list-style-type: none"> - Convenient for multi-line installations - Good heat dispersion
Disadvantage	<ul style="list-style-type: none"> - Inconvenient to maintain - Risk of external damage 	<ul style="list-style-type: none"> - High cost of installation - Expansion possibilities limited by permissible current 	<ul style="list-style-type: none"> - High cost

2. Maximum Cable Pulling Tension

Cable pulling tension is calculated using the following equation and must be within the conductor's allowable tensile strength.

- | | |
|---|-----------------------------------|
| 1) Using a pulling eye to conductor | 2) Using a stocking grip |
| - Copper conductor : 7kg/mm ² of conductor | - $T=0.357 D^2$ [kg] |
| - Aluminum conductor : 4kg/mm ² of conductor | - D : Cable overall diameter [mm] |

3. Minimum Bending Radius

The data on the table below shall be considered in order to install cables without any damage on their electrical and physical properties.

Minimum Bending Radius / D : Cable diameter

Cable type	wire screen	Lead sheath	Corrugated Sheath	Smoothed AL	Armoured
Min. bending radius	20D	20D	18D	20D	15D

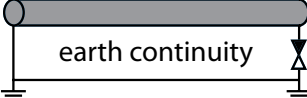

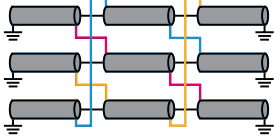

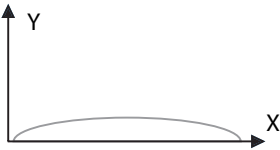

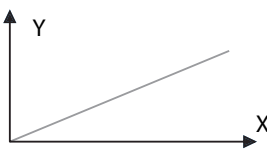

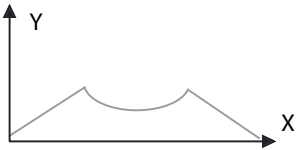

4. Maximum Sidewall Pressure

$$P = T / R$$

P : Maximum sidewall pressure [kg/m] T : Maximum pulling tension [kg] R : Minimum bending radius [m]

5. Bonding Systems

Typical Bonding Systems

	Solid Bonding System	Single Point Bonding System	Cross Bonding System
Characteristics	<ul style="list-style-type: none"> - Sheath induced voltage is zero - Low permissible current caused by circulating loss 	<ul style="list-style-type: none"> - Suitable for short routes generally without any joints 	<ul style="list-style-type: none"> - Suitable for long routes with two or more joints

8. Current Status of R&D

154kV Eco-friendly Polypropylene Insulated Cable

[154kV CU/PP/Corr.AL/PE.2500SQMM]

- Increased demand for cables that can increase transmission capacity due to higher capacity and efficiency of power cables
- Improvement of transmission capacity due to increase in normal operating temperature
 - Allowable current increased by more than 10% compared to equivalent XLPE cable
- Possible to reduce construction costs by replacing small-sized PP insulated cable
- Possible to minimize failure because of no by-products
- Possible to reduce emission of greenhouse gas by reducing power usage during the manufacturing process
- Completed PQ test according to IEC 60840 at 110°C (KEMA)
- Completed green certification for cable manufacturing process
- Pilot project in progress in connection with domestic transmission lines (Planned to replace 154kV XLPE cable)

Contents	Details
Conductor Cross Sectional area	154kV 600~2500SQ (Including 1600SQ)
Conductor Temp.	110°C
Test Conditions	Type Test (115~120°C , 2U0, 20Cycle)
	PQ Test (110~115°C , 1.7U0, 180Cycle)

320/525kV HVDC XLPE VSC type Land Cable system

[HVDC Submarine & Underground Cable System Project Scheme]

[±320kV XLPE 2500SQMM]

[±525kV XLPE 2500SQMM]

- The proportion of land cable system in the HVDC system is increasing
- 320/525kV XLPE VSC type extruded cable is designed to maintain a 40-year lifetime
- Smooth Aluminum sheath is applied to favor long-distance transmission
- Production of sophisticated products by applying the highest grade XLPE and VCV process considering space charge accumulation
- Completed 320kV Type test and Pre-qualification test according to IEC 62895 standard
- Ongoing 525kV Self-verification test according to CIGRE TB 852 (with LCC type, VSC type)

Description	Condition	Remark
